Technology Driven Products to Move to Larger Headquarters

Loveland, Colorado—Technology Driven Products (TDP), a full service electronics and electromechanical product realization company, has announced plans to move to a larger facility later this year. TDP's growth in the past few years has the company finding its current facility bursting at the seams. TDP presently occupies 27,000 square feet of office and manufacturing space. TDP once fit into the corner of its present building, but has grown to completely fill the space originally occupied by a number of companies. Faced with being out of space earlier this year, TDP acquired an additional 6,000 square feet of space in a nearby facility to meet its ever increasing business needs.

The new TDP headquarters, with over 40,000 square feet of space, will give TDP the extra space it needs for the design and manufacture of products for a growing customer base. Located just a few miles north of TDP's present facility in the Loveland Tech Center, the new facility is located on Hwy 402, near the former HP and Agilent campuses.

"This move for TDP gives us the opportunity to greatly expand our services to our customers. The new facility will be a state-of-the-art design and manufacturing center, with the flexibility to quickly adjust production line setups to align with business demands" said Diana Precht, Vice President of Sales and Marketing. "We will be able to quickly switch between low-volume production lines for a high mix of products, to high-volume lines capable of satisfying our largest customers."

TDP has been providing innovative product design and manufacturing services to customers since 1995. TDP's roots are in product development services. The company has continually expanded its services to offer customers a wider range of engineering and manufacturing capabilities. TDP's growth in size and revenue is a direct result of listening carefully to its customers, and providing them with cost-effective solutions and services.
